e-Learning FAQ - for Academic Staff

Links within a page I uploaded don't work *

For links to other websites, e-packs or online journals, see [My reading list link doesn't work](#) on this page. If you're linking to another file in ePembelajaran@UMT, read on:

Have you uploaded the destination file to ePembelajaran@UMT?

If you create a link to another file, you must make sure that that file is also uploaded into the same File resource on ePembelajaran@UMT. For example, if the filereadings.htm contains a link to a file article.pdf, then you have to upload both readings.htm **and** article.pdf into a single File resource in ePembelajaran@UMT, otherwise the link won't work.

Cure: Click on the Add an activity or resource link. A new window will launch from which you can choose to add resources, when you scroll to the bottom. Choose file and click Add and drag and drop or browse for the file to upload it (the one containing the link), then repeat the process to upload the destination file (the one being linked to). Before you save the resource as a whole, click on the main file and choose set main file.

Prevention: Whenever you create links within an HTML file, remember that these need to be uploaded too (as well as any images you insert).

* ePembelajaran@UMT 'Teacher/Editors' ONLY
